Application for Planning

S.57 Land Use Planning and Approvals Act 1993

The following application has been received:

Application No.: **DA2025311**

Location: **Hearps Road, West Ulverstone (CT183648/1000)**

Proposal: **Site works and excavation associated with residential subdivision - no use class**

The application may be inspected at the Administration Centre, 19 King Edward Street, Ulverstone during Office hours and on the council's website: www.centralcoast.tas.gov.au Any person may make representation in relation to the applications (in accordance with S.57(5) of the Act) by writing to the Chief Executive Officer, PO Box 220, Ulverstone 7315 or by email to admin@centralcoast.tas.gov.au and quoting the Application No. Any representations received by the Council are classed as public documents and will be made available to the public where applicable under the *Local Government (Meeting Procedures) Regulations 2025*.

The representation must be made on or before **23 February 2026**

Date of Notification: **7 February 2026**

EASEMENTS AND PROFITS

Each lot on the plan is together with:-
(1) such rights of drainage over the drainage easements shown on the plan (if any) as may be necessary to drain the stormwater and other surplus water from such lot; and
(2) any easements or profits a prendre described hereunder.
Each lot on the plan is subject to:-
(1) such rights of drainage over the drainage easements shown on the plan (if any) as passing through such lot as may be necessary to drain the stormwater and other surplus water from any other lot on the plan; and
(2) any easements or profits a prendre described hereunder.
The direction of the flow of water through the drainage easements shown on the plan is indicated by arrows.

EASEMENTS

Lot 1 is:

SUBJECT TO a Pipeline & Services Easement (as hereinafter defined) in gross in favour of TasWater over the land marked PIPELINE AND SERVICE EASEMENT 4.50 WIDE on the Plan.

Lot 2 is:

SUBJECT TO a Pipeline & Services Easement (as hereinafter defined) in gross in favour of TasWater over the land marked PIPELINE AND SERVICE EASEMENT 4.50 WIDE on the Plan.

Lot 3 is:

SUBJECT TO a Pipeline & Services Easement (as hereinafter defined) in gross in favour of TasWater over the land marked PIPELINE AND SERVICE EASEMENT 4.50 WIDE on the Plan.

Lot 4 is:

SUBJECT TO a Pipeline & Services Easement (as hereinafter defined) in gross in favour of TasWater over the land marked PIPELINE AND SERVICE EASEMENT 4.50 WIDE on the Plan.

Lot 5 is:

SUBJECT TO a Pipeline & Services Easement (as hereinafter defined) in gross in favour of TasWater over the land marked PIPELINE AND SERVICE EASEMENT 4.50 WIDE on the Plan.

Lot 6 is:

SUBJECT TO a Pipeline & Services Easement (as hereinafter defined) in gross in favour of TasWater over the land marked PIPELINE AND SERVICE EASEMENT 4.50 WIDE on the Plan.

FENCING PROVISION

In respect to each lot shown on the Plan (except lot 500 and 1000) the Vendor (Future Developments Group Pty Ltd) shall not be required to fence.

COVENANTS

The owners of each lot shown on the plan covenant with the Vendor and the Central Coast Council to the intent that the burden of these covenants may run with and bind the covenantor's lot and every part thereof and that the benefit thereof shall be annexed to and devolved with each and every part thereof and be in favour of the Central Coast Council to observe the following stipulations:–

(a) Not to erect or permit to be erected on the said lot any building which does not have a roof constructed of tiling or other substance which does not reflect light.

NOTE: Every annexed page must be signed by the parties to the dealing or where the party is a corporate body be signed by the persons who have attested the affixing of the seal of that body to the dealing.

ANNEXURE TO SCHEDULE OF EASEMENTS PAGE 3 OF 5 PAGES	Registered Number SP 183648
SUBDIVIDER: FUTURE DEVELOPMENTS GROUP PTY LTD FOLIO REFERENCE: 113873/1	

(b) Not to use unpainted galvanized iron or other reflective material or substance in the construction of any roof or any part of any dwelling or other structure on the said lot.

(c) Not to construct or place kit, re-locatable or weatherboard dwellings on the lot.

(d) Not to construct any dwellings on the lot that shall have less than seventy (70) per cent of the external walls comprising glass, masonry, brick or rendered finish.

(e) Not to commence construction of a dwelling on the lot without providing for a lockable skip bin of a capacity of at least three (3) cubic metres to remove all rubbish and discarded materials.

(f) Not to use or allow the lot to be used for public housing, public rental projects or public assistance programs or where the owner of the lot does not have the right to determine the tenants.

(g) The Vendor reserves the right for themselves or their assigns to sell lease or otherwise deal with any lot on the plan either subject to any of the above conditions and/or restrictive covenants or any one of them or not subject to such modifications thereof as they in their sole discretion deem fit. The exercise of the said right in relation to any lot shall not release the owners of any other lot from any of the conditions or covenants affecting or imposed upon such other lots will give the owners of any lot any right of action against the vendor or any other person.

All lots on the Plan are burdened by the restrictive covenants contained in Sealed Plan 104488, ~~in that, the said MAXWELL PEARS and MOLLY ELIZABETH PEARCE shall not be required to fence~~. 9/11/22
JARRYD JAMES PRICE
SOLICITOR FOR SUBDIVIDER

DEFINITIONS

"**Drainage Easement**" means a right of drainage (including the right of construction of drains) for Central Coast Council with which the right shall be capable of enjoyment for the purpose of carrying away stormwater and other surplus water form any land over or under the land herein indicated as the land over which the right is to subsist, and through all sewers and drains which may hereafter be made or passing under, through, and along the last-mentioned land and the right for Central Coast Council and its employees, agents and contractors from time to time and at all times hereafter if it or they should think fit to enter into and upon the last-mentioned land and to inspect, repair, cleanse, and amend any such sewer or drain without doing unnecessary damage to the said land.

"**Easement Land**" means the land which is subject to an easement in favour of TasWater.

"**Infrastructure**" means-

NOTE: Every annexed page must be signed by the parties to the dealing or where the party is a corporate body be signed by the persons who have attested the affixing of the seal of that body to the dealing.

ANNEXURE TO SCHEDULE OF EASEMENTS PAGE 4 OF 5 PAGES	Registered Number SP 183648
SUBDIVIDER: FUTURE DEVELOPMENTS GROUP PTY LTD FOLIO REFERENCE: 113873/1	

Infrastructure owned or for which TasWater is responsible and includes but is not limited to-

(a) sewer pipes and water pipes and associated valves;

(b) telemetry and monitoring devices;

(c) inspection and access pits;

(d) electricity assets and other conducting media (excluding telemetry and monitoring devices);

(e) markers or signs indicating the location of the Easement Land or any other infrastructure or any warnings or restrictions with respect to the Easement Land or any other Infrastructure;

(f) anything reasonably required to support, protect or cover any other Infrastructure;

(g) any other infrastructure whether of a similar nature or not to the preceding which is reasonably required for the piping of sewage or water, or the running of electricity, through the Easement Land or monitoring or managing that activity; and

(h) where the context permits, any part of the Infrastructure.

"**Owner**" means the registered proprietors of the lot in the folio of the Register from time to time.

"**Pipeline and Services Easement**" means-

FIRSTLY, THE FULL RIGHT AND LIBERTY for the TasWater and its employees, contractors, agents and all other persons duly authorised by it, at all times to:

(1) enter and remain upon the Easement Land with or without machinery, vehicles, plant and equipment;

(2) investigate, take soil, rock and other samples, survey, open and break up and excavate the Easement Land for any purpose or activity that TasWater is authorised to do or undertake;

(3) install, retain, operate, modify, relocate, maintain, inspect, cleanse and repair the Infrastructure;

(4) remove and replace the Infrastructure;

(5) run and pass sewage, water and electricity through and along the Infrastructure;

(6) do all works reasonably required in connection with such activities or as may be authorised or required by any law:

(a) without doing unnecessary damage to the Easement Land; and

(b) leaving the Easement Land in a clean and tidy condition; and

(7) if the Easement Land is not directly accessible from a highway, then for the purpose of undertaking any of the preceding activities TasWater may with or without employees, contractors, agents and all other persons authorised by it, and with or without machinery, vehicles, plant and equipment enter

NOTE: Every annexed page must be signed by the parties to the dealing or where the party is a corporate body be signed by the persons who have attested the affixing of the seal of that body to the dealing.

ANNEXURE TO SCHEDULE OF EASEMENTS PAGE 5 OF 5 PAGES	Registered Number SP 183648
SUBDIVIDER: FUTURE DEVELOPMENTS GROUP PTY LTD FOLIO REFERENCE: 113873/1	

the Lot from the highway at any then existing vehicle entry and cross the Lot to the Easement Land; and

(8) use the Easement Land as a right of carriageway for the purpose of undertaking any of the preceding purposes on other land, TasWater reinstating any damage that it causes in doing so to any boundary fence of the Lot.

SECONDLY, the benefit of a covenant in gross for TasWater with the registered proprietor/s of the Easement Land and their successors and assigns not to erect any building, or place any structures, objects, vegetation, or remove any thing that supports, protects or covers any Infrastructure on or in the Easement Land, without the prior written consent of TasWater to the intent that the burden of the covenant may run with and bind the servient land and every part thereof and that the benefit thereof may be annexed to the easement herein described.

"**TasWater**" means the Tasmanian Water and Sewerage Corporation Pty Ltd (ACN 162 220 653) its successors & assigns.

EXECUTED by **FUTURE DEVELOPMENTS GROUP PTY LTD** (ACN 645 164 674) by its duly authorised Attorney JARRYD JAMES PRICE pursuant to Power of Attorney registered on 30th March 2021 Registered Number PA 129039 having received no notice of the revocation thereof)

ATTN: Town Planning Department
planning@centralcoast.tas.gov.au

To whom it may concern,

DEVELOPMENT APPLICATION – SITE WORKS FOR SUBDIVISION (CUT & FILL)

This letter has been prepared to accompany the development application for development on CT 183648/1000 for site works associated with residential subdivision of the land (cut and fill).

Figure 1 - Location of site proposed for development (boundaries approximate only) (Source: ListMap)

The proposed works include cut and fill to provide for build pads on the land titles under creation as well as roads and services.

This document provides statements against the existing planning provisions under the Tasmanian Planning Scheme & Central Coast Local Provisions Schedule.

Figure 2 - Existing access from Hearps Road

Figure 3 - Site photo, facing north and east, June 2024

Under clause 6.2.6, this development is not required to be categorised into a use class.

The proposal relies on the exercise of discretion in relation to the works and cl.15.6.1.

1. OVERVIEW

1.1. Property Owner

The site is owned by Future Developments Group Pty Ltd. A full copy of the land title is provided as Appendix A.

1.2. Proposal

The proposed development involves cut and fill and is intended to result in building pads and services on the subject titles under creation.

Under cl. 6.2.6, the works are not required to be categorised into a use class. As such, the works are discretionary as per cl.7.10.1, and the majority of assessment is provided through the Zone Purpose and the applicable Code(s).

Detailed plans have been provided as Appendix B.

1.3. Site and background information

The site is currently being developed for residential subdivision, as per DA20210601.

The area being developed is cleared in the majority, with exotic grass forming the remaining vegetation. The site clearing, access and other provisions were assessed in the application for subdivision.

The site is accessible from Hearps Road and Jackson Avenue and is surrounded by residential development.

The site is sloped, running from the highest point in the north eastern corner, down across the site to the south western corner.

2. LEGISLATIVE FRAMEWORK

2.1. TASMANIAN PLANNING SCHEME – CENTRAL COAST

The following examines the proposed development with respect to the relevant provisions of the Scheme.

2.1.1. General Residential Zone

As per cl.7.10.3 the purpose of the applicable zone is to be considered during assessment.

The development is intended for residential use / development, in accordance with cl.8.1.1, and is able to be fully serviced as per cl.8.1.2.

Non-residential use would be able to be considered on the lots under the provisions of the planning scheme at that point in time (cl.8.1.3), as would visitor accommodation (cl. 8.1.4).

The works proposed are considered to fit within the Zone Purpose.

8.0 General Residential Zone	
8.3 Use Standards	
No new use is proposed.	N/A
8.4 Development Standards for dwellings	
No dwellings are proposed.	N/A
8.5 Development standards for non-dwellings	
None of the listed developments are proposed.	N/A
8.6 Development standards for subdivision	
No subdivision is proposed in this application.	N/A
8.6.2 Roads	
No roads are proposed in this application.	N/A
8.6.3 Services	
No services are proposed in this application.	N/A

2.1.2. C15.0 Landslip Hazard Code

The development sits within the 'significant works' as defined in the C15.0 Landslip Hazard Code.

C15.6	Development Standards for Buildings and Works	
C15.6.1	**Buildings and works within a landslip Hazard Area**	
No acceptable solution.		**Relies on PC**
P1.1	The application is accompanied by a geotechnical report addressing the risk of a landslip event. That concludes that "a tolerable level of risk can be achieved for the proposed works, provided the works of the site is in accordance with the recommendations".	**Complies**
P1.2	The supporting report also states that "it is considered that the works would not adversely impact the site and immediate surrounds, including land or public infrastructure, provided that the development adheres to the principles of good hillside practice and the recommendations".	**Complies**
P1.3	The supporting report concludes that landslip reduction measures are not required outside the boundary of the site.	**Complies**

2.2. TASMANIAN PLANNING SCHEME – CENTRAL COAST LPS

None applicable.

3. CONCLUSION

The proposal is for site works (cut and fill) on the subject site.

The application is accompanied by a geotechnical report demonstrating compliance with the relevant provisions of the C15.0 Landslip Hazard code.

Please do not hesitate to make contact on 0409 793 803 or email me at theresia@eqtownplanning.com.au to discuss this matter.

Regards,

Theresia Williams

1 INTRODUCTION

A limited scope investigation has been conducted for Future Developments Group Pty Ltd at the site of a subdivision development at 4 Hearps Road Subdivision, Ulverstone.

A review of the Land Information System Tasmania (LIST) website shows the site is partially located within a low landslide hazard band with the proposed development having earthworks greater than 1m in depth, and therefore is not exempt under Section C15.4.1 (e).

Therefore, a landslide risk assessment is required to satisfy the Landslide Hazard Code of the Tasmanian Planning Scheme – Central Coast, Section C15.6.1 - Building and works within a landslip hazard area.

As such, the investigation has been conducted to provide the following:

- Carry out a landslide risk assessment;
- Provide recommendations and good hillside practices to maintain or possibly lower the landslide risks; and
- Earthwork recommendations (i.e. recommended cut batter slopes for lots 20 to 29).

Plans of the subdivision were provided, prepared by CSE Tasmania Pty Ltd, drawing Nos. 4806-43_G101 Rev2 to G108 Rev.2 and C101 Rev2 to C159 Rev.2, dated 23/07/2022.

We understand that in addition to the earthworks proposed within the subdivision plans, the client is proposing cut excavations along the northern boundary of the site. The proposed maximum height of the cut batter is approximately 3.0m at the rear of Lots 20 to 29. The client plans to maintain a 1V:4H slope on the northern side, with a 1.0m clearance from the fence before excavation starts. In areas where the cut height is reduced to less than around 1.5m, the slope may be increased to 1V:3H.

2 BACKGROUND

2.1 Geology

The Mineral Resources Tasmania (MRT) Digital Geological Atlas, 1:25,000 Series, indicates that the proposed cut excavations along the rear of Lots 20 to 29 is underlain by Cretaceous-Neogene period predominantly deeply-weathered basalt.

2.2 Landslide Susceptibility

A review of the Land Information System Tasmania (LIST) website shows the proposed cut excavations within Lot 24 and Lot 25 is partially within a mapped low landslide hazard band. The remainder of the lots along the northern boundary (up to Lot 29) are not within a mapped landslide hazard band (refer to Figures 1 and 6).

2.2.1 Landslide Inventory

Examination of the Mineral Resources Tasmania (MRT) Tasmanian Landslide Map Series, Ulverstone – Landslide Inventory Map, 1:25,000 scale, indicates that there are no landslides mapped within the site or immediate surrounds, with the closest feature being a landslide with unknown activity (Landslide MRT ID. 2811) is mapped approximately 220m to the north of the site.

An extract of the Landslide Inventory Sheet is provided as Figure 2.

2.2.2 Geomorphology

Examination of the MRT Tasmanian Landslide Hazard series, Ulverstone – Geomorphology sheet, 1:25,000 scale, indicates that the proposed development area within the northwest of the site predominately has slope angles of between 7° to 13°.

An extract of the geomorphology sheet is provided as Figure 3.

2.2.3 Slide Susceptibility

Examination of the MRT Tasmanian Landslide Hazard series, Ulverstone – Deep-Seated Landslide Susceptibility Map, 1:25,000 scale, indicates that the site is not mapped within any susceptibility zones for first-time failure.

Examination of the MRT Tasmanian Landslide Map Series, Ulverstone – Shallow Slide and Flow Susceptibility Map, indicates that the northwest of the site where the proposed cut excavations are proposed is located within a low susceptibility source area for shallow landslides.

An extract of the shallow slide and flow susceptibility sheet is provided as Figure 4.

3 FIELD INVESTIGATION

The field investigation was conducted on 07 May 2024 and involved the drilling of three boreholes by 4WD mounted auger rig to depths of 3.4m of 4.8m.

Insitu vane shear strength tests and pocket penetrometer tests were conducted in the clay layers encountered in the investigation, with samples being obtained for subsequent laboratory testing.

The results of the field and laboratory tests are shown on the borehole logs.

The borehole logs are provided in Appendix A with the locations shown on Figure 5 attached.

4 SITE CONDITIONS

4.1 Site Description

The site is located on a southwesterly dipping hillslope and is currently undeveloped, with the ground surface having gentle to moderate slopes towards the southwest and a low cover of grass.

At the time of the investigation, the ground surface of the site was being modified by earthworks along the northwestern boundary. This involved creating an approximately 3m high cut batter with a slope angle of approximately 1V:3H (18.5°), which was located outside of the mapped low landslide hazard band (refer to Figure 5 and Plate 1).

Plate 1: View of the proposed excavation area looking to the west

The slopes within the site and surrounds show no sign of recent landslide activity, with no springs or seepages identified on the site.

4.2 Subsurface Conditions

The investigation indicated that the subsurface conditions varied slightly across the site. Borehole BH1 encountered clayey silt topsoil to a depth of 0.2m, overlying clayey silt to a depth of 3.0m, overlying silty clay to a depth of 3.8m, underlain by extremely weathered material (having rock fabric with soil properties) to the refusal depth of 4.0m.

Borehole BH2 encountered clayey silt topsoil to a depth of 0.2m, overlying clayey silt to a depth of 4.6m, underlain by extremely weathered material to the refusal depth of 4.8m. Borehole BH3 encountered clayey silt topsoil to a depth of 0.2m, underlain by clayey silt to the investigated depth of 3.4m.

Auger refusal within Boreholes BH1 and BH2 was inferred to be on highly weathered bedrock.

The boreholes did not encounter any sign of groundwater seepage over the investigated depths.

Full details of soil conditions encountered are presented on the borehole logs.

4.3 Laboratory Testing

The laboratory test results are summarised in Table 1 below:

Table 1: Summary of Laboratory Test Results

Sample Identifications	BH1 3.0m to 3.2m
Liquid Limit (%)	69
Plastic Limit (%)	43
Plasticity Index (%)	26
Linear Shrinkage (%)	15.5
Classification	MH
Soil Category	Clayey SILT

Laboratory Atterberg Limits and Linear Shrinkage tests conducted on the clayey silt samples taken from the site indicate that the clay soils at this site possess a high shrink/swell potential.

Published correlations between the Plasticity Index and angle of internal friction indicated that the laboratory-tested soils would have peak strength angle of internal friction values of about 26° to 28°.

5 GEOLOGICAL MODEL

From a review of available reports, geological maps and information collected during the site investigation, a general geological model of the site has been inferred. Generally, the site comprises Cretaceous - Neogene period predominantly deeply-weathered basalt, that is underlain by Cambrian period sedimentary rocks at depth.

6 PRE-DEVELOPMENT SLOPE STABILITY

The qualitative likelihood, consequence and risk terms used in this report for risk to property are given in Appendix B. The risk terms are defined by a matrix that brings together different combinations of likelihood and consequence. Risk matrices help to communicate the results of risk assessment, rank risks, set priorities and develop transparent approaches to decision making. The notes attached to the tables and terms and the comments on response to risk in Appendix B are intended to help explain the risk assessment and management process.

In light of the findings of this investigation (depth to bedrock, topographical features, geology, and slope angles), the likelihood of small to medium scale failures occurring on the steeper slopes within northern portions of the site affecting the infrastructure or future buildings is considered RARE, whilst a larger scale failure occurring is considered BARELY CREDIBLE.

The potential consequences of landslides occurring on the steeper slopes within the northern portion of the site for a small to medium scale failure are assessed to be MEDIUM, and MAJOR for a large scale event.

Therefore, the corresponding qualitative risk for both these events occurring is assessed as VERY LOW.

In our experience, regulating authorities allow developments to proceed with LOW to VERY LOW risk.

7 POST DEVELOPMENT SLOPE STABILITY ANALYSES

In order to maintain the very low landslide risk, slope stability analysis of the proposed earthworks was carried out to determine if the proposed cut slope angles provide an adequate Factor of Safety against failure.

7.1 Development of Geotechnical Models

The three major elements of a geotechnical model for slope stability analyses are:

1. Ground surface topography and cross-sections through the surface;
2. Shear strengths of subsurface layers (Strength Profile); and
3. The phreatic groundwater surface.

The three major elements have been modelled utilising the following steps:

- Cross-Section A-B (Refer Figure 5) was derived from the 2013 LiDAR survey;
- Geological model based on the site investigation and laboratory results;
- No groundwater was encountered in the investigation therefore, the phreatic surface was not considered within the model; and
- The strength parameters of the soil profile (soil cohesion and internal friction angle) for stability analyses, were estimated from empirical correlations sourced from Figure D1 of AS 4678 – 2002 Earth-retaining Structures based on the laboratory results (Section 4.3).

Table 2 below summarises the soil strength parameters adopted in the slope stability analyses.

Table 2 - Geotechnical Parameters Adopted in Analyses

Material	Unit Weight (kN/m^3)	Effective Strength Parameters	
		Cohesion, c' (kPa)	Friction Angle Ø' (°)
High Plasticity Clayey SILT (Basalt Derived Residual Soils)	18.0	2	26°

7.2 Factor of Safety

Slope stability analysis provides a numerical value for the Factor of Safety (FoS) against failure of a nominated surface. In simple terms, the FoS is a ratio of activating

(sliding) forces against resisting forces along the failure surface. Activating forces are generally the weight of soil on the upper portion of a slope and load conditions while resisting forces derive from the shear strength of the materials intersected by the failure surface. A FoS of 1.0 represents a condition of incipient failure or limiting equilibrium. A FoS of greater than 1.0 indicates that the slope should not fail, while a FoS of equal or less than 1.0 indicates that failure could occur.

The acceptable *design* value for the FoS of any failure surface is not a fixed number and depends on the type of theoretical analysis and the perceived acceptable risk. For example, a FoS of around 1.1 is often acceptable in an analysis that includes earthquake loading, while an analysis based upon assumed values, not backed up by material testing, may require a FoS of 1.5 or greater for long-term stability. The FoS also depends on the characteristics of the landslide, including volume and size.

Therefore, considering the proposed excavations are permanent with heights of 3.0, the corresponding minimum acceptable factor of safety (FOS) adopted as acceptance criteria are as follows:

Table 3: Analysed Scenarios and Acceptance Criteria

Analysed Scenario	Minimum Acceptable FoS
Permanent 3.0m cuts	1.5

7.3 Analysed Scenarios and Results

Slope stability analysis was carried out using the two-dimensional, limit equilibrium-based computer program SLOPE/W, utilising Morgenstern-Price method and circular slip surface grid search method based on introduced entry and exit failure surfaces.

The graphical output of the stability analyses is provided in Figure A below, with the resulting FoS being 1.83:

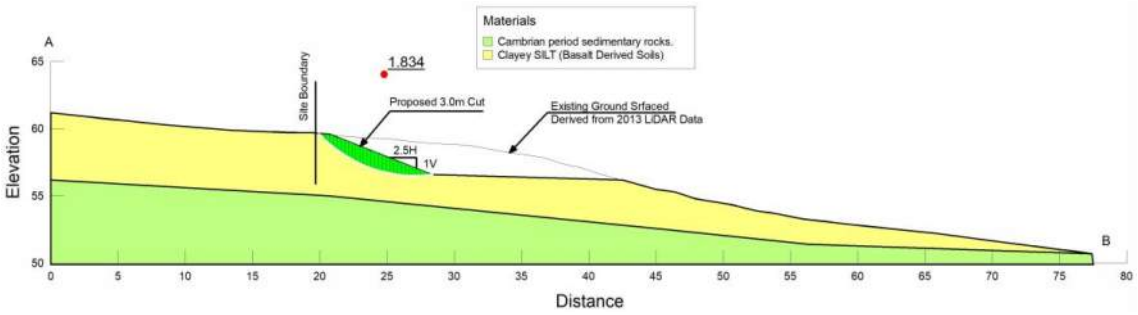

Figure A: Slope stability analysis of the proposed cut batter

The FoS value above indicates that the slope stability analyses have returned acceptable FoS for the analysed slopes' long-term criteria conditions. Therefore, the corresponding risk for the failure occurring is assessed as VERY LOW.

It is noted that shallow/small-scale slides were found to be the cause of failure.

8 DISCUSSION AND RECOMMENDATIONS

8.1 General

The outcomes of the assessments for landslide risk to property (above) only apply if the recommendations provided herein are adhered to.

Therefore, provided the development of the site is in accordance with the recommendations within our report, we consider that a tolerable level of risk can be achieved in accordance with Section C15.6.1 (Building and works within a landslip hazard area) of the Landslide Hazard Code of the Tasmanian Planning Scheme – Central Coast Council with the following Performance Criteria:

- **C15.6.1 - P1.1** - Building and works within a landslip hazard area must minimise the likelihood of triggering a landslip event and achieve and maintain a tolerable risk from landslip: **a tolerable level of risk can be achieved for the proposed works, provided the works of the site is in accordance with the recommendations outlined below;**
- **C15.6.1 - P1.2** - A landslip hazard report also demonstrates that the buildings and works do not cause or contribute to landslip on the site, on adjacent land or public infrastructure: **It is considered that the works would not adversely impact the site and immediate surrounds, including land or public infrastructure, provided that the development adheres to the principles of good hillside practice and the recommendations provided below; and**
- **C15.6.1 - P1.3** - If landslip reduction or protection measures are required beyond the boundary of the site the consent in writing of the owner of that land must be provided for that land to be managed in accordance with the specific hazard reduction or protection measures: **will not be required.**

An Engineering Certificate addressing the Landslide Code is provided in Appendix C.

8.2 Cuts

- **The proposed cuts where <u>less than 3.0m</u> in height may be battered at slope angles <u>no steeper than 1 vertical to 2.5 horizontal (1V:2.5H – 21.8°)</u>; and**
- **Recommend vegetation be grown and maintained on the cut batter slopes to minimise erosion.**

GEOTON Pty Ltd

Geotechnical Consultants - Limitations of report

These notes have been prepared to assist in the interpretation and understanding of the limitations of this report.

Project specific criteria

The report has been developed on the basis of unique project specific requirements as understood by Geoton and applies only to the site investigated. Project criteria are typically identified in the Client brief and the associated proposal prepared by Geoton and may include risk factors arising from limitations on scope imposed by the Client. The report should not be used without further consultation if significant changes to the project occur. No responsibility for problems that might occur due to changed factors will be accepted without consultation.

Subsurface variations with time

Because a report is based on conditions which existed at the time of subsurface exploration, decisions should not be based on a report whose adequacy may have been affected by time. For example, water levels can vary with time, fill may be placed on a site and pollutants may migrate with time. In the event of significant delays in the commencement of a project, further advice should be sought.

Interpretation of factual data

Site assessment identifies actual subsurface conditions only at those points where samples are taken and at the time they are taken. All available data is interpreted by professionals to provide an opinion about overall site conditions, their likely impact on the proposed development and recommended actions. Actual conditions may differ from those inferred to exist, as it is virtually impossible to provide a definitive subsurface profile which includes all the possible variabilities inherent in soil and rock masses.

Report Recommendations

The report is based on the assumption that the site conditions as revealed through selective point sampling are indicative of actual conditions throughout an area. This assumption cannot be substantiated until earthworks and/or foundation construction is almost complete and therefore the report recommendations can only be regarded as preliminary. Where variations in conditions are encountered, further advice should be sought.

Specific purposes

This report should not be applied to any project other than that originally specified at the time the report was issued.

Interpretation by others

Geoton will not be responsible for interpretations of site data or the report findings by others involved in the design and construction process. Where any confusion exists, clarification should be sought from Geoton.

Report integrity

The report as a whole presents the findings of the site assessment and the report should not be copied in part or altered in any way.

Geoenvironmental issues

This report does not cover issues of site contamination unless specifically required to do so by the client. In the absence of such a request, Geoton take no responsibility for such issues.

GEOTON Pty Ltd

Soil Description Explanation Sheet (1of 2)

DEFINITION

In engineering terms, soil includes every type of uncemented or partially cemented inorganic or organic material found in the ground. In practice, if the material can be remoulded or disintegrated by hand in its field condition or in water it is described as a soil. Other materials are described using rock description terms.

CLASSIFICATION SYMBOL AND SOIL NAME

Soils are described in accordance with the AS 1726: 2017 as shown in the table on Sheet 2.

PARTICLE SIZE DEFINITIONS

NAME	SUBDIVISION	SIZE (mm)
BOULDERS		>200
COBBLES		63 to 200
GRAVEL	Coarse	19 to 63
	Medium	6.7 to 19
	Fine	2.36 to 6.7
SAND	Coarse	0.6 to 2.36
	Medium	0.21 to 0.6
	Fine	0.075 to 0.21
SILT		0.002 to 0.075
CLAY		<0.002

MOISTURE CONDITION

Coarse Grained Soils

Dry Non-cohesive and free running.

Moist Soil feels cool, darkened in colour. Soil tends to stick together.

Wet As for moist but with free water forming when handling.

Fine Grained Soils

Moist, dry of Plastic Limited – w < PL
Hard and friable or powdery.

Moist, near Plastic Limit – w ≈ PL
Soils can be moulded at a moisture content approximately equal to the plastic limit.

Moist, wet of Plastic Limit – w > PL
Soils usually weakened and free water forms on hands when handling.

Wet, near Liquid Limit - w ≈ LL

Wet, wet of Liquid Limit - w > LL

CONSISTENCY TERMS FOR COHESIVE SOILS

TERM	UNDRAINED STRENGTH s_u (kPa)	FIELD GUIDE
Very Soft	≤12	Exudes between the fingers when squeezed in hand
Soft	12 to 25	Can be moulded by light finger pressure
Firm	25 to 50	Can be moulded by strong finger pressure
Stiff	50 to 100	Cannot be moulded by fingers
Very Stiff	100 to 200	Can be indented by thumb nail
Hard	>200	Can be indented with difficulty by thumb nail
Friable	–	Can be easily crumbled or broken into small pieces by hand

RELATIVE DENSITY OF NON-COHESIVE SOILS

TERM	DENSITY INDEX (%)
Very Loose	≤15
Loose	15 to 35
Medium Dense	35 to 65
Dense	65 to 85
Very Dense	> 85

DESCRIPTIVE TERMS FOR ACCESSORY SOIL COMPONENTS

DESIGNATION OF COMPONENT	IN COARSE GRAINED SOILS		IN FINE GRAINED SOILS	TERM
	% Fines	% Accessory coarse fraction	% Sand/ gravel	
Minor	≤5	≤15	≤15	Trace
	>5, ≤12	>15, ≤30	>15, ≤30	With
Secondary	>12	>30	>30	Prefix

SOIL STRUCTURE

ZONING		CEMENTING	
Layer	Continuous across the exposure or sample.	Weakly cemented	Easily disaggregated by hand in air or water.
Lens	Discontinuous layer of different material, with lenticular shape.	Moderately cemented	Effort is required to disaggregate the soil by hand in air or water.
Pocket	An irregular inclusion of different material.		

GEOLOGICAL ORIGIN

WEATHERED IN PLACE SOILS

Extremely Weathered material	Material is weathered to such an extent that it has soil properties. Structure and/or fabric of parent rock material retained and visible.
Residual soil	Structure and/or fabric of parent rock material not retained and visible.

TRANSPORTED SOILS

Aeolian soil	Carried and deposited by wind.
Alluvial soil	Deposited by streams and rivers.
Colluvial soil	Soil and rock debris transported downslope by gravity.
Estuarine soil	Deposited in coastal estuaries, and including sediments carried by inflowing rivers and streams, and tidal currents.
Fill	Man-made deposit. Fill may be significantly more variable between tested locations than naturally occurring soils.
Lacustrine soil	Deposited in freshwater lakes.
Marine soil	Deposited in a marine environment.

GEOTON Pty Ltd

Soil Description Explanation Sheet (2 of 2)

SOIL CLASSIFICATION INCLUDING IDENTIFICATION AND DESCRIPTION

FIELD IDENTIFICATION PROCEDURES (Excluding particles larger than 63 mm and basing fractions on estimated mass)						**GROUP SYMBOL**	**PRIMARY NAME**
COARSE GRAINED SOIL More than 65% of soil excluding oversize fraction is larger than 0.075 mm	(A 0.075 mm particle is about the smallest particle visible to naked eyes)	GRAVEL More than half of coarse fraction is larger than 2.36 mm	CLEAN GRAVEL (Little or no fines)	Wide range in grain size and substantial amounts of all intermediate particle sizes		GW	GRAVEL
				Predominantly one size or a range of sizes with some intermediate sizes missing		GP	GRAVEL
			GRAVEL WITH FINES (Appreciable amount of fines)	Non-plastic fines (for identification procedures see ML and MH below)		GM	Silty GRAVEL
				Plastic fines (for identification procedures see CL, CI and CH below)		GC	Clayey GRAVEL
		SAND More than half of coarse fraction is smaller than 2.36 mm	CLEAN SAND (Little or no fines)	Wide range in grain size and substantial amounts of all intermediate sizes		SW	SAND
				Predominantly one size or a range of sizes with some intermediate sizes missing		SP	SAND
			SAND WITH FINES (Appreciable amount of fines)	Non-plastic fines (for identification procedures see ML and MH below)		SM	Silty SAND
				Plastic fines (for identification procedures see CL, CI and CH below)		SC	Clayey SAND
FINE GRAINED SOIL More than 35% of soil excluding oversize fraction is smaller than 0.075 mm		IDENTIFICATION PROCEDURES ON FRACTIONS <0.075 mm					
			DRY STRENGTH	**DILATANCY**	**TOUGHNESS**		
		SILT & CLAY (low to medium plasticity, LL ≤ 50)	None to Low	Slow to Rapid	Low	ML	SILT
			Medium to High	None to Slow	Medium	CL, CI	CLAY

		Highly Organic Soil	Readily identified by colour, odour, spongy feel and frequently by fibrous texture.			Pt	PEAT

● LL – Liquid Limit.

COMMON DEFECTS IN SOILS

TERM	**DEFINITION**	**DIAGRAM**
PARTING	A surface or crack across which the soil has little or no tensile strength. Parallel or sub parallel to layering (e.g. bedding). May be open or closed.	
FISSURE	A surface or crack across which the soil has little or no tensile strength, but which is not parallel or sub parallel to layering. May be open or closed. May include desiccation cracks.	
SHEARED SEAM	Zone in clayey soil with roughly parallel near planar, curved or undulating boundaries containing closely spaced, smooth or slickensided, curved intersecting fissures which divide the mass into lenticular or wedge-shaped blocks.	
SHEARED SURFACE	A near planar curved or undulating, smooth, polished or slickensided surface in clayey soil. The polished or slickensided surface indicates that movement (in many cases very little) has occurred along the defect.	

TERM	**DEFINITION**	**DIAGRAM**
SOFTENED ZONE	A zone in clayey soil, usually adjacent to a defect in which the soil has a higher moisture content than elsewhere.	
TUBE	Tubular cavity. May occur singly or as one of a large number of separate or inter-connected tubes. Walls often coated with clay or strengthened by denser packing of grains. May contain organic matter.	
TUBE CAST	An infilled tube. The infill may be uncemented or weakly cemented soil or have rock properties.	
INFILLED SEAM	Sheet or wall like body of soil substance or mass with roughly planar to irregular near parallel boundaries which cuts through a soil mass. Formed by infilling of open defects.	

Appendix B

Qualitative Terminology for Use in Assessing Risk to Property

QUALITATIVE TERMINOLOGY FOR USE IN ASSESSING RISK TO PROPERTY

QUALITATIVE MEASURES OF LIKELIHOOD

Approximate Annual Probability		Implied Indicative Landslide Recurrence Interval		Description	Descriptor	Level
Indicative Value	Notional Boundary					
10^{-1}	5x10-2	10 years	20 years	The event is expected to occur over the design life.	ALMOST CERTAIN	A
10-2	5x10-3	100 years	200 years	The event will probably occur under adverse conditions over the design life.	LIKELY	B
10-3	5x10-4	1000 years	2000 years	The event could occur under adverse conditions over the design life.	POSSIBLE	C
10-4	5x10-5	10,000 years	20,000 years	The event might occur under very adverse circumstances over the design life.	UNLIKELY	D
10-5	5x10-6	100,000 years	200,000 years	The event is conceivable but only under exceptional circumstances over the design life.	RARE	E
10-6		1,000,000 years		The event is inconceivable or fanciful over the design life.	BARELY CREDIBLE	F

Note: (1) The table should be used from left to right; use Approximate Annual Probability or Description to assign Descriptor, not *vice versa*.

QUALITATIVE MEASURES OF CONSEQUENCES TO PROPERTY

Approximate Cost of Damage		Description	Descriptor	Level
Indicative Value	Notional Boundary			
200%	100%	Structure(s) completely destroyed and/or large scale damage requiring major engineering works for stabilisation. Could cause at least one adjacent property major consequence damage.	CATASTROPHIC	1
60%	40%	Extensive damage to most of structure, and/or extending beyond site boundaries requiring significant stabilisation works. Could cause at least one adjacent property medium consequence damage.	MAJOR	2
20%	10%	Moderate damage to some of structure, and/or significant part of site requiring large stabilisation works. Could cause at least one adjacent property minor consequence damage.	MEDIUM	3
5%	1%	Limited damage to part of structure, and/or part of site requiring some reinstatement stabilisation works.	MINOR	4
0.5%		Little damage. (Note for high probability event (Almost Certain), this category may be subdivided at a notional boundary of 0.1%. See Risk Matrix.)	INSIGNIFICANT	5

Notes: (2) The Approximate Cost of Damage is expressed as a percentage of market value, being the cost of the improved value of the unaffected property which includes the land plus the unaffected structures.

(3) The Approximate Cost is to be an estimate of the direct cost of the damage, such as the cost of reinstatement of the damaged portion of the property (land plus structures), stabilization works required to render the site to tolerable risk level for the landslide which has occurred and professional design fees, and consequential costs such as legal fees, temporary accommodation. It does not include additional stabilisation works to address other landslides which may affect the property.

(4) The table should be used from left to right; use Approximate Cost of Damage or Description to assign Descriptor, not vice versa

QUALITATIVE TERMINOLOGY FOR USE IN ASSESSING RISK TO PROPERTY (CONTINUED)

QUALITATIVE RISK ANALYSIS MATRIX – LEVEL OF RISK TO PROPERTY

LIKELIHOOD		CONSEQUENCES TO PROPERTY (With Indicative Approximate Cost of Damage)				
	Indicative Value of Approximate Annual Probability	1: CATASTROPHIC 200%	2: MAJOR 60%	3: MEDIUM 20%	4: MINOR 5%	5: INSIGNIFICANT 0.5%
A – ALMOST CERTAIN	10^{-1}	VH	VH	VH	H	M or L (5)
B - LIKELY	10^{-2}	VH	VH	H	M	L
C - POSSIBLE	10^{-3}	VH	H	M	M	VL
D - UNLIKELY	10^{-4}	H	M	L	L	VL
E - RARE	10^{-5}	M	L	L	VL	VL
F - BARELY CREDIBLE	10^{-6}	L	VL	VL	VL	VL

Notes: (5) For Cell A5, may be subdivided such that a consequence of less than 0.1% is Low Risk.
(6) When considering a risk assessment it must be clearly stated whether it is for existing conditions or with risk control measures which may not be implemented at the current time.

RISK LEVEL IMPLICATIONS

Risk Level		Example Implications (7)
VH	VERY HIGH RISK	Unacceptable without treatment. Extensive detailed investigation and research, planning and implementation of treatment options essential to reduce risk to Low; may be too expensive and not practical. Work likely to cost more than value of the property.
H	HIGH RISK	Unacceptable without treatment. Detailed investigation, planning and implementation of treatment options required to reduce risk to Low. Work would cost a substantial sum in relation to the value of the property.
M	MODERATE RISK	May be tolerated in certain circumstances (subject to regulator's approval) but requires investigation, planning and implementation of treatment options to reduce the risk to Low. Treatment options to reduce to Low risk should be implemented as soon as practicable.
L	LOW RISK	Usually acceptable to regulators. Where treatment has been required to reduce the risk to this level, ongoing maintenance is required.
VL	VERY LOW RISK	Acceptable. Manage by normal slope maintenance procedures.

Note: (7) The implications for a particular situation are to be determined by all parties to the risk assessment and may depend on the nature of the property at risk; these are only given as a general guide

Certificate details:

Certificate type:	Geotechnical	*(description from Column 2 of the Director of Building Control's determination)*

In issuing this certificate the following matters are relevant –

Documents:	Geoton Pty Ltd, Report Reference No. GL24219Ab Rev.1, dated 24/05/2024.
Relevant calculations:	Refer to report
References:	Australian Geomechanics Society – Practice Note Guidelines for Landslide Risk Management, 2007

GEOTON Pty Ltd
Geotechnical Consultants

Substance of Certificate:

Findings and recommendations of report (Report Reference No. GL24219Ab Rev.1).

From the Tasmanian Planning Scheme (TPS) the site is mapped partially within a low Landslide Hazard Band. As such, a landslide risk assessment is required to determine if a tolerable risk can be achieved and maintained for the type, scale and intended life of use of the development.

The landslide risk assessment was conducted in accordance with Australian Geomechanics Society (AGS) – Practice Note Guidelines for Landslide Risk Management, 2007. Our report concluded that the qualitative landslide risk for the site is at worst a VERY LOW risk provided the development of the site is in accordance with the recommendations within our report and the implementation of any required treatment works. In our experience, regulating authorities allow developments to proceed with VERY LOW to LOW risk.

Therefore, provided the development of the site is in accordance with the recommendations within our report, then we consider that an acceptable level of risk can be achieved for the development of the site in accordance with section C15.6.1 (Building and works within a landslip hazard area) of the Landslide Hazard Code of the TPS – Central Coast. That is, the level of likely risk from exposure to the natural hazard (landslide) is considered to be tolerable for the proposed residential development.

Scope or Limitations

The report provides a qualitative landslide risk assessment which identifies the landslide risks at the site and provides recommendations to maintain, improve and possibly reduce the risk of landslides so as not cause or contribute to the risk of landslides on the site and lands in the locality.

The site is within an area of inherent doubtful slope stability and landslides are a natural ongoing geological process. There will be always some level of landslide risk within an area of inherent doubtful slope stability. The recommendations of the report are provided to maintain, improve and possibly reduce the risk of landslides on the site and lands in the locality.

The recommendations for the design of the proposed works are in accordance with prevailing geological conditions described in the report for the site, assessed landslide risks and recommended good hillside practices.

I certify the matters described in this certificate.

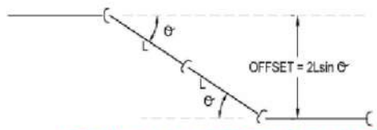
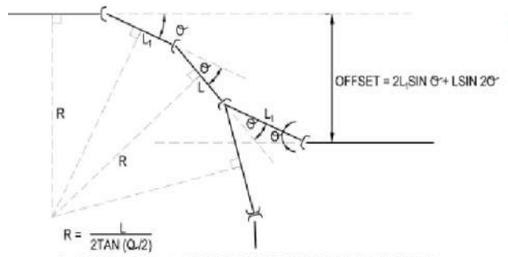
- TASMANIAN SUBDIVISION GUIDELINES (Oct 2013)

NOTE - FOLLOWING DEFLECTION VALUES MUST BE AMENDED FOR TASWATER TO 0.75% OF THE 1 DEGREE MANUFACTURERS DEFLECTION

DETAIL A: 1 PIPE DEFLECTION OFFSET



DETAIL B: 2 PIPE DEFLECTION OFFSET



L = R 2TAN (α /2) (ie CUT PIPE LENGTH FOR REQUIRED RADIUS R)

TO REDUCE THE DISTANCE OVER WHICH THE DEFLECTION IS MADE, THE LENGTH OF L_1 MAY BE REDUCED UP TO $\frac{L}{2}$

DETAIL C: 3 PIPE DEFLECTION OFFSET or CURVED MAIN

TABLE 3: DEFLECTIONS

	PIPE / JOINT TYPE			
	TYPICAL RETIC PVC PIPE	TYPICAL RETIC DI PIPE	TYPICAL PVC PIPE + DOUBLE SOC CONNECTOR	COMMENTS
TYPICAL FULL LENGTH FOR L (m)	6	5.5	6 (PVC)	
TYPICAL MINIMUM LENGTH FOR L (m)	3	2.25	3 (PVC)	
TYPICAL θ MAX (degrees)	1	3.5	7	VARIES DEPENDING ON MANUFACTURER
MAX 1 PIPE MAX OFFSET (mm) 1	100	(340)	◇730◇	HORIZONTAL OR VERTICAL DEFLECTION
MAX 2 PIPE MAX OFFSET (mm) 1	210	◇670◇	◇146◇	2 or 3 PIPE HORIZONTAL DEFLECTION USUALLY NOT PREFERRED ALONG STRAIGHT ROADS DUE TO DISRUPTION OF OTHER ASSETS
MAX 3 PIPE MAX OFFSET (mm) 1	(420)	◇1340◇	◇2910◇	
TYPICAL MIN R (m)	344	90	49	ASSUMING USE OF FULL PIPE LENGTHS
VERTICAL BLOCKING REQUIREMENTS	NO THRUST BLOCK REQUIRED	THRUST CALCULATION REQUIRED 2	THRUST CONTROL REQUIRED 3	VERTICAL BLOCKS REQUIRE WATER AGENCY APPROVAL 5
HORIZONTAL BLOCKING REQUIREMENTS	NO THRUST BLOCK REQUIRED	THRUST CALCULATION REQUIRED 2	THRUST BLOCK REQUIRED 4	

NOTES ON TABLE 3:

ALL FIGURES HAVE BEEN CALCULATED ASSUMING FULL PIPE LENGTHS

1 MAX OFFSETS CALCULATED USING FULL LENGTH PIPES.
2 THRUST CONTROL REQUIREMENTS NEED TO BE CALCULATED AS PER THE METHOD DESCRIBED IN MRWA-W-204.
3 BLOCK AS PER TABLE 1 OF MRWA-W-205A USING ½ OF THE MASS VOLUME OF THE 11.25° BEND.
4 BLOCK AS PER 6 DEG BENDS OF MRWA-W-204.
5 FLANGED OR WELDED BENDS PREFERRED TO VERTICAL BLOCKS.

TO REDUCE EXCAVATION DEPTHS AND / OR LIMIT DISRUPTION TO HORIZONTAL ALIGNMENTS, THE FOLLOWING ARRANGEMENTS ARE GENERALLY PREFERRED:

(○) FIGURES IN CIRCLES INDICATED THAT THIS OFFSET IS NORMALLY BETTER ACHIEVED USING 22½° BENDS (FOR 300 TO 600 OFFSETS).

◇ FIGURES IN DIAMONDS INDICATE THAT THIS OFFSET IS NORMALLY BETTER ACHIEVED USING 45° BENDS (FOR > 600 OFFSETS).

Project STAGE 2B, 3&4, 4 HEARPS ROAD, WEST ULVERSTONE
Title GENERAL DETAILS PLAN

Drawing No: 4806-43_G102 | Revision: 3

NOTES (GENERAL, EARTHWORKS & LANDSCAPING)

GENERAL

1. T.W. - TAS WATER
2. ALL SETOUT BY A LICENSED SURVEYOR.
3. LEVEL DATUM - AHD
4. PRIOR TO ANY EXCAVATION, CONTRACTOR IS TO LOCATE ALL EXISTING UNDERGROUND SERVICES
5. ALL EXISTING MANHOLES AND SERVICE PITS / LIDS AFFECTED BY THE WORKS TO BE RAISED TO SUIT DESIGN LEVELS. WORK TO BE CARRIED OUT BY THE RELEVANT AUTHORITY AT DEVELOPERS EXPENSE.
6. CONTRACTOR TO ARRANGE PROVISION OF 'AS CONSTRUCTED' INFORMATION. SURVEY CO-ORDINATES TO BE RECORDED IN GDA94 & AHD AND PROVIDED IN ELECTRONIC AND HARD COPY FORMAT IN ACCORDANCE WITH THE REQUIREMENTS OF COUNCIL & T.W.
7. SERVICE OFFSETS AS PER TAS STANDARD DRAWINGS.
8. ALL ROAD AND STORMWATER WORKS IN ACCORDANCE WITH TAS STANDARD DRAWINGS.

EARTHWORKS

9. STRIP TOPSOIL FROM ENTIRE AREA OF ROADWAYS AND EXTERNAL AREAS THAT ARE TO BE CUT OR FILLED. TOPSOIL SHALL BE STOCKPILED ON SITE WHERE DIRECTED.
10. REDUNDANT OPEN DRAINS TO BE FILLED TO SUIT SURROUNDING NATURAL SURFACE.
11. AREAS OF FILL GREATER THAN 300mm IN DEPTH SHALL BE FILLED AND COMPACTED IN ACCORDANCE WITH AS3798. CONTRACTOR TO APPOINT A GEOTECHNICAL TESTING AUTHORITY AND PROVIDE TESTING IN ACCORDANCE WITH TYPE 2 OR TYPE 3 EARTHWORKS. SUPERINTENDENT TO WITNESS PROOF ROLL OF STRIPPED SITE AND PLACEMENT OF FILL TO AS 3798.
12. NO FILLING OVER SERVICE MAINS IS PERMITTED. ALL FILLING TO BE DONE PRIOR TO PIPE TRENCHING AND INSTALLATION.

LANDSCAPING

13. ALL DISTURBED SURFACES SHALL BE REVEGETATED AND STABILISED WITH STABILISATION GRASS MIX.
14. GOOD QUALITY TOPSOIL TO BE USED ON NATURE STRIP AREAS. GRASS SEED TYPES TO BE ADVISED BY COUNCIL
15. ADVISORY NOTE - LANDSCAPING DESIGN, INCLUDING STREET FURNITURE AND BOLLARDS TO BE CONFIRMED.

NOTES (ROADWORKS & DRAINAGE)

ROADWORKS

1. SERVICE TRENCHES UNDER TRAFFICKED AREAS SHALL BE BACKFILLED WITH COMPACTED PAVEMENT SUB BASE MATERIAL.
2. ALL DRIVEWAYS TO BE TYPE KCS AS PER TASMANIAN STANDARD DRAWING TSD-R14.
3. KCM MODIFIED KERB TO BE USED FROM PRAM RAMPS AROUND CUL-DE-SAC HEADS, FOOTPATH TO BE DRIVEWAY STANDARD IN THESE AREAS.

STORMWATER

1. FULL HEIGHT BENCHING TO BE USED IN ACCORDANCE WITH TSD SW03.
2. PROVIDE ELECTROMAGNETIC, METAL IMPREGNATED TAPE IN ALL NON METALLIC PIPE TRENCHES. ENSURE TAPE TERMINATIONS ARE ACCESSIBLE.
3. TOPS OF MANHOLES SHALL BE FINISHED TO MATCH ADJACENT FINISHED SURFACE LEVELS AND GRADES.
4. PIPE BEDDING AND HAUNCHING - AS PER TSD-G01.
5. 20mm CRUSHED ROCK BEDDING TO BE USED IN STORMWATER TRENCHES WITH SUB-SOIL DRAINS.
6. NEW PIPEWORK SHALL BE:
   - AS SPECIFIED ON STORMWATER LONG SECTIONS
   - PROPERTY CONNECTIONS: 150mmØ P.V.C. (SN8)AS PER TSD-SW25.
7. ALL PIPES GREATER THAN 100mmØ ARE TO BE RUBBER RING JOINTED AND LAID ON A MINIMUM OF 75mm SAND BEDDING EXTENDING TO 150mm ABOVE THE TOP OF PIPE.
8. ALL STORMWATER LOT CONNECTIONS SHALL BE BROUGHT NOMINALLY 100mm ABOVE SURROUNDING SURFACE AND SEALED WITH A GLUED END CAP. CAPS SHALL BE PAINTED GREEN. LOCATIONS OF CONNECTION POINTS TO BE MARKED WITH STAR PICKETS.
9. PROVIDE ELECTROMAGNETIC, METAL IMPREGNATED TAPE IN ALL NON CONDUCTIVE PIPE TRENCHES. ENSURE TAPE TERMINATIONS ARE ACCESSIBLE.
10. STORM WATER MANHOLE BENCHING IN ACCORDANCE WITH TSD-SW03.
11. SIDE ENTRY PITS TO TSD-SW10 - TYPE 4 UNLESS UNO.
12. MANHOLE, LIDS AND SURROUNDS:
    - IN THE ROAD RESERVATION AND TRAFFICKED AREAS - CLASS D - 'GATIC' HEAVY DUTY OR APPROVED EQUIVALENT.
    - NON TRAFFICKED AREAS - 'GATIC' LIGHT DUTY OR APPROVED EQUIVALENT.

NOTES (SEWER & WATER)

SEWER

1. ALL SEWER SUPPLY CONSTRUCTION TO:
   - SEWERAGE SUPPLY CODE OF AUSTRALIA (WSA 02 2014 3.1 MRWA) - PART 3: CONSTRUCTION AS AMENDED BY THE TASWATER SUPPLEMENT
2. NEW PIPEWORK SHALL BE:
   - AS SPECIFIED ON SEWER LONG SECTIONS
3. PROPERTY CONNECTIONS: 100 DIA. P.V.C. (SN10) SCJ AND IN ACCORDANCE WITH TYPE 4 ... MRWA-S-304 INCLUDING A SURFACE AS SHOWN.
   NOTE - INSPECTION OPENINGS SHALL BE 0.5m INSIDE THE PROPERTY BOUNDARY NOT OUTSIDE THE BOUNDARY.
   - TASWATER APPROVED PRODUCTS ARE CONTAINED ON THE CITY WEST WATER WEBSITE HTTP://WWW.MRWA.COM.AU/PAGES/PRODUCTS.ASPX
   - INSPECTED PRIOR TO BACKFILL
4. PROVIDE ELECTROMAGNETIC, METAL IMPREGNATED TAPE IN ALL NON METALLIC PIPE TRENCHES. ENSURE TAPE TERMINATIONS ARE ACCESSIBLE.
5. ALL LIVE CONNECTIONS BY TW AT DEVELOPERS COST.
6. VISUAL INSPECTION OF SEWER MANHOLES AND SEWER LINES PRIOR TO BACKFILLING.
7. ACCEPTANCE TESTING GENERALLY IN ACCORDANCE WITH SECTION 21 OF THE SEWERAGE CODE OF AUSTRALIA WSA03-2014-3.1, MELBOURNE RETAIL WATER AGENCIES EDITION - VERSION 2, PART 2 CONSTRUCTION - SECTION 21.4.2.2.
8. AIR PRESSURE TESTING IN ACCORDANCE WITH SECTION 21.4.1 OF THE SEWERAGE CODE OF AUSTRALIA WSA03-2014-3.1 MELBOURNE RETAIL WATER AGENCIES EDITION - VERSION 2. TABLE 21.10 PROVIDES A SUMMARY OF THE REQUIRED TESTING PRESSURES.

WATER

1. ALL WATER SUPPLY CONSTRUCTION TO:
   - WATER SUPPLY CODE OF AUSTRALIA (WSA 03-2011-3.1 VERSION MRWA EDITION V2.0) - PART 2: CONSTRUCTION AS AMENDED BY THE THE TASWATER SUPPLEMENT.
   - TASWATER'S STANDARD DRAWINGS TWS-W-0002 SERIES
   - WATER METERING POLICY/METERING GUIDELINES
   - BOUNDARY BACKFLOW CONTAINMENT REQUIREMENTS AND AS3500.1:2018.
2. NEW PIPEWORK SHALL BE:
   - SERIES 2 OPVC PN16 - SIZE AS INDICATED ON THE DRAWINGS
   - 63mm O.D. PE100 PN16 (SDR11)
   - ALL FITTINGS SHALL BE PN16 RATED
   - TASWATER APPROVED PRODUCTS ARE CONTAINED ON THE CITY WEST WATER WEBSITE HTTP://WWW.MRWA.COM.AU/PAGES/PRODUCTS.ASPX
   - INSPECTED PRIOR TO BACKFILL
   - BACKFILLED UNDER ROADWAYS IN COMPACTED SUBBASE 1 GRAVEL AT OMC COMPACTED IN 150mm LAYERS.
3. PROVIDE THRUST BLOCKS AT ALL BENDS AND TEES.
4. ALL LIVE CONNECTIONS BY TW AT DEVELOPERS COST.
5. ALL STOP VALVES TO BE CLOCKWISE CLOSING, EXCEPT FOR DEVONPORT CITY COUNCIL WHICH REQUIRE COUNTER CLOCKWISE CLOSING.
6. PROVIDE C.I. VALVE BOX COVERS TO ALL VALVES AND FIRE PLUG.
7. STOP VALVES AND FIRE PLUGS SHALL BE MARKED IN ACCORDANCE WITH THE IPWEA FIRE HYDRANT GUIDELINES: TASMANIA DIVISION.
8. FIRE PLUGS AND VALVE POSITIONS TO BE MARKED IN ACCORDANCE WITH THE WSA CODE AND TASWATER SUPPLEMENT.
9. PROVIDE ELECTROMAGNETIC, METAL IMPREGNATED TAPE IN ALL NON METALLIC PIPE TRENCHES. ENSURE TAPE TERMINATIONS ARE ACCESSIBLE.
10. MINIMUM COVER:- UNDER ROADWAYS (EXCLUDING MAJOR ROADS) FOR PIPES UP TO AND INCLUDING 225 DIA 600mm. COVER IN RESIDENTIAL PIPELINE EASEMENTS CAN REDUCE TO 450mm.
11. ALL PROPERTY CONNECTIONS SHALL BE CONSTRUCTED IN ACCORDANCE WITH TASWATER STANDARD DRAWING TWS-W-0002 SERIES - INCLUDING THE REQUIREMENT FOR A DN100 SLEEVE UNDER ALL TRAFFICABLE ROADS. THEY SHALL BE DN25(I.D.20) HDPE (PE100) SDR 11 PN16 PIPE.
12. ALL FITTINGS TO BE F.B.E.
13. FIRE PLUGS TO HAVE 100mm RISERS WITH SPRING TYPE PLUGS.
14. VISUAL INSPECTION OF WATER LINE BEDDING AND HAUNCHING PRIOR TO BACKFILLING.
15. ACCEPTANCE TESTING GENERALLY IN ACCORDANCE WITH PART 2 CONSTRUCTION, SECTION 19 OF THE WATER SUPPLY CODE OF AUSTRALIA WSA03-2011-3.1 MELBOURNE RETAIL WATER AGENCIES EDITIONS - VERSION 2.
16. HYDROSTATIC PRESSURE TESTING GENERALLY IN ACCORDANCE WITH PART 2 CONSTRUCTION, SECTION 19.4 OF THE WATER SUPPLY CODE OF AUSTRALIA WSA03-2011-3.1 MELBOURNE RETAIL WATER AGENCIES EDITIONS - VERSION 2.
17. MAIN TO BE DISINFECTED PRIOR TO CONNECTION TO THE RETICULATION NETWORK. REFER TO WSA CODE FOR DETAILS.
18. PLACEMENT OF WATER MAINS IN FILL REQUIRES THE CONTRACTOR TO PROVIDE DOCUMENTARY EVIDENCE INCLUDING:-
    - 18.1. THE COMPOSITION OF FILL MATERIAL, VERIFYING THAT IT CONTAINS NO ORGANIC OR OTHER MATERIALS THAT DECOMPOSE OR OTHERWISE LEAD TO LONG TERM SETTLEMENT
    - 18.2. THE PLACED LAYER THICKNESS
    - 18.3. THE COMPACTION METHOD USED
    - 18.4. THE DEPTH BELOW THE SURFACE OF EACH COMPACTED LAYER AT WHICH EACH FIELD DENSITY WAS MEASURED.
    - 18.5. THE FIELD DENSITY CALCULATION SHEETS AND RESULTS FOR ALL OF THE FILL BELOW THE INVERT OF THE PROPOSED WATER MAIN, VERIFYING THAT IT HAS AN IN-SITU DENSITY OF NOT LESS THAN 95% OF ITS STANDARD MAXIMUM DRY DENSITY (AS1289.5.1.1).

NOTES FOR SURVEYOR

- WHERE MARKED ON THE SEWERAGE DRAWINGS THAT SEWER SERVICES DON'T CONTROL THE WHOLE LOT THE PLAN OF SUBDIVISION COUNCIL ENDORSEMENT PAGE IS TO NOTE, PURSUANT TO SECTION 83 OF THE LOCAL GOVERNMENT (BUILDING AND MISCELLANEOUS PROVISIONS) ACT 1993, THAT TASWATER CANNOT GUARANTEE CUSTOMERS SANITARY DRAINS WILL BE ABLE TO DISCHARGE VIA GRAVITY INTO TASWATER'S SEWERAGE SYSTEM,
- TASWATER EASEMENTS SHALL BE CREATED IN ACCORDANCE WITH TASWATER'S PIPELINE AND SERVICES EASEMENT DEFINITION - SEE TASWATER WEBSITE HTTP://WWW.TASWATER.COM.AU/ARTICLEDOCUMENTS/489/PIPELINE%20AND%20SERVICES%20EASEMENT%20PRECEDENT%20FOR%20USE%20WITH%20SCHEDULE%200F%20EASEMENTS.PDF.ASPX
- COUNCIL STORMWATER EASEMENT TO BE PROVIDED AS PER SURVEY PLAN

CBR TESTING NOTES:

CBR TESTING TO BE UNDERTAKEN WHEN BOX OUT TO 340mm BELOW FSL IS COMPLETED.

ALL IN-SITU CBR READINGS ARE TO BE ADJUSTED IN ACCORDANCE WITH THE TABLE R23.2 OF DEPARTMENT OF STATE GROWTH SPECIFICATION R23 (REPRODUCED RIGHT) WHERE SUBGRADE IS IN A DRY CONDITION TO ACCOUNT FOR STRENGTH DECREASE WHEN SATURATED.

CBR TESTS TO BE PERFORMED EVERY 200m² OF PAVEMENT AREA BY THE DESIGN ENGINEER. SOFT AREAS MAY BE PLOTTED ON SITE FOR ADDITIONAL EXCAVATION.

PROVIDE MINIMUM 24 HOURS NOTICE TO THE ENGINEER PRIOR TO STRIPPING THE SITE TO SUB-GRADE LEVEL TO FACILITATE CBR TESTING.

NOTES:

1. DESIGN SEWER LOT CONNECTION INVERTS DO NOT TAKE INTO ACCOUNT ROAD CROSSING CLASHES WITH OTHER SERVICES, ADDITIONAL DEPTH TO BE ADDED TO THE INVERTS WHERE THIS IS AN ISSUE.
2. THESE PLANS SHOW THE CONTROL LEVELS FOR THE NOMINATED LOTS AT 1m INSIDE THE LOT BOUNDARY AND AT A MINIMUM LONGITUDINAL GRADE AND MINIMUM COVER ABOVE THE SEWER MAIN.
3. IT IS EXPECTED THE CONTRACTOR WILL RUN LINES WITH A CONSTANT VERTICAL GRADE TO THIS POINT.
4. ALL CROSSINGS UNDER ROADWAYS REQUIRE COMPACTED FCR BACKFILL.
